

Anitesh Kumar Shaw

QA Architect | Power BI Reporting | Agentic AI & RPA in QA

Tampa, FL • emailanitesh@gmail.com • (973) 641-4269 • [linkedin.com/in/aniteshshaw](https://www.linkedin.com/in/aniteshshaw)

EXECUTIVE SUMMARY

Quality engineering leader with 18+ years transforming QA across logistics, finance, advisory, telecom, and LMS. Experienced in modernizing QA through **agentic AI** (MCP/QIS), **test automation**, and **RPA**. Built **QIS**, a Model Context Protocol-powered QA intelligence workflow that operationalizes custom agents, skills, structured prompts, and spec kits to bring consistency to story analysis, risk modeling, test design, and PR validation. Strengths span **UiPath- and script-based automations**, **Power BI** dashboards, and KPI governance that give executives dependable readiness and quality signals. Widely recognized for speeding delivery, cutting manual toil, and raising engineering standards.

Additionally, I hold the distinction of being a “Department of Homeland Security (DHS) trusted tester,” proficient and passionate about conducting accessibility testing using various tools and techniques to ensure digital products' compliance with accessibility standards such as WCAG, ADA, and Section 508 compliance. My commitment to inclusiveness and accessibility underscores my dedication to creating digital solutions that work for everyone.

CORE STRENGTH

- **Leadership:** Led and mentored 30+ distributed QA engineers; strengthened QA discipline, raised engineering standards, and drove cross-team collaboration.
- **Operational Excellence:** Shortened release cycles from 6 weeks → 2 weeks enabling 2 installs/week; generated 5+ extra deployments in 2025 and 12 projected in 2026.
- **Testing Strategy:** Established Web, Desktop, Mobile, ETL, and API testing frameworks to improve reliability, performance, and user experience.
- **UAT & QE Governance:** Led UAT planning, acceptance criteria, and risk-informed QA governance for enterprise-scale programs.

SELECTED ACHIEVEMENTS

- **QIS (QA Intelligence System):** MCP-driven agentic QA workflow (**custom agents, AI skills, spec kits, reasoning chains**) cutting analysis/design effort 60–70% and standardizing QA decisions across squads.
- **LM Quick Installer:** Automated environment provisioning (PowerShell + config) reducing setup time 25m → 2–3m (~90%) and eliminating onboarding delays.
- **iADD Service Dependency Dashboard:** Built a live dependency & readiness dashboard, reducing false defects by **70–75%** and saving **4–6 hours** of developer investigation per incident. Delivered the first version in **under a week**.
- **AIssueBotExpress (Hackathon Winner):** Created an AI-powered defect triage agent that auto-summarizes issues, identifies probable root causes, and speeds up triage cycles; recognized with internal innovation award.
- **TRP – Team & Resource Productivity Tool:** Automated QA activity tracking platform increasing visibility and team efficiency.
- **RPA & Workflow Automation:** Implemented UiPath- and script-driven automations for repetitive QA operations (environment checks, data prep, health validations), freeing engineers for higher-value testing.
- **Quality Outcomes:** FY25–26 maintained ~98% CSI with zero escalations; drove QIS and LM Quick Installer adoption across TQL Dev/QE.

ORGANIZATION ENABLEMENT & INFLUENCE

- Delivered multiple **All Hands, TechTrek, and Lunch & Learn** sessions to train teams on AI-driven QA, MCP workflows, automation strategy, and modern engineering practices.
- Drove enterprise adoption of **AI-enhanced quality engineering**, shaping cross-team QA governance and engineering standards.

TECHNICAL SKILLS

- **Automation:** Playwright, Selenium, API (Postman/RestSharp), CI/CD (Azure DevOps, Jenkins)
- **Agentic AI:** MCP workflows, custom agents, structured prompts, spec kits; Azure OpenAI & Cognitive Search/Speech
- **RPA & Workflow Automation:** UiPath; Python/PowerShell task automation; environment workflows & installer scripting
- **Data/Backend:** PL/SQL, ETL validation, Oracle, Boomi; Python/PowerShell utilities
- **Quality & Performance:** Test strategy/UAT, risk-based testing, JMeter, health checks/monitoring
- **BI & Visibility:** Power BI (defect trends, readiness KPIs), Tableau; KPI governance
- **Accessibility:** DHS Trusted Tester; NVDA, ANDI, Axe, Lighthouse, WAVE, ACRT; WCAG/Section 508

PROFESSIONAL EXPERIENCE

TATA CONSULTANCY SERVICES (TCS) — QA Architect | 2007–Present

Served several Fortune 500 and multi-national clients, managed and worked with resources in multiple geographies. See list of clients served over the last 16+ years below:

Client: Total Quality Logistics (TQL) | QA Technical Architect | Feb 2023–Present | Logistics

TQL is a leading North American freight brokerage and logistics firm, seeking to modernize legacy systems and enhance their transportation operations through cloud-based architecture, improved analytics, and compliance programs.

Key Leadership & Delivery Responsibilities

- Lead and mentor a **30+ member** global QA team (US & India), strengthening test discipline, ownership, and cross-team engineering collaboration.
- Defined modern QA practices and **automation architecture** across Playwright, Selenium, API automation, Azure DevOps CI/CD, and shift-left governance.
- Directed **ETL QA** for GP → Oracle migration using Boomi, ensuring data accuracy, transformation integrity, and multi-system consistency.
- Created QIS (MCP-driven agentic workflow) to standardize story review, risk models, scenarios, and PR validation; reduced analysis/design effort 60–70%.
- Engineered LM Quick Installer (PowerShell) cutting environment setup 25m → 2–3m (~90% reduction).
- Built iADD dependency/readiness dashboard to cut false defects 70–75% and save 4–6 hours per incident.
- Established RPA operational automations (UiPath + scripts) for repetitive QA tasks (pre-checks, data seeding, health validation) to reduce manual toil.
- Enabled org-wide adoption via All Hands/TechTrek/Lunch & Learn on AI-driven QA, MCP workflows, and modern engineering practices.
- Designed **Power BI dashboards** to provide leadership with visibility into defect patterns, readiness KPIs, and quality trends.

Client: KPMG Global (2018 – Feb,2023), NJ-US and Kolkata-INDIA

QA Architect and BI Reporting

Domain: E-Learning, innovation, and Audit

- Managed a team of 25+ associates across multiple locations.
- Coordinated with stakeholders to gather UAT requirements and create comprehensive test plans.
- Developed and executed UAT test cases, tracked defects, and ensured timely resolution.
- Led ETL testing for large-scale data migration projects, validating data transformations, and ensuring data quality.
- Spearheaded the development of AIVideoTranscriber, an AI-driven video-to-text transcription tool.
- Enhanced existing automation frameworks to support new capabilities and technologies.
- Utilized Azure Cognitive Services and embeddings to improve content accessibility and searchability.
- Conducted accessibility testing to ensure compliance with WCAG, ADA, and Section 508 standards.

Client: KPMG US (2015 – 2018), Seal Beach - CA, Montvale – NJ (US)

Sr QA Lead, Scrum Master

Domain: Enterprise Solution & Mobility, Advisory

- Managed multiple QA projects simultaneously and delivered the highest quality project without jeopardizing product delivery schedules.
- Requirement capturing, documentation of the application depicting high level BPM/ interaction diagrams.
- Strategizing automation to automate existing manual processes and extreme automation of the applications.
- Actively participated in various scrum calls and scheduled the defect triage, Mid sprint review with the team.
- Review the status of the project and take corrective measures.
- Validating the Build and deploying the latest change in Test Environment.

Client: Citibank (2009 – 2015), Missouri - US and Kolkata - INDIA

QA Lead, Analyst and SME

Domain: Real Estate Lending

- Lead a Testing projects account in the Real Estate Lending domain, for more than 5 years.
- I worked as consultant and application SME for 4 years in US. Involved in software requirement gathering, test strategy and test design.
- Have closely collaborated with the client's BA team and development vendors, formulating testing solutions and providing advisory services on optimization of processes and formulation of test strategies.
- Managed and delivered Manual and Automation testing solutions for software applications.
- Spearheaded the formation of Testing Center of Excellence (TCoE) at client organization, being the lead member of the TCoE A&P (Analysis & Planning) team for more than 4 years.

Client: British Telecom (2007 – 2009), Kolkata - INDIA

Application Developer

Domain: Telecom

- Preparation of the technical design document.
- Preparing Data model, designing and code documentation of the application.
- Developing the back-end part components like packages & procedures using PL/SQL

CERTIFICATION

- Azure AI Fundamentals (AI-900) – Microsoft
- Generative AI Fundamentals – Databricks
- Power BI & Tableau Fundamentals – Edureka
- Data Science with Python – Edureka
- Apache Kafka Fundamentals
- DHS Trusted Tester (TT-2203-02564) – U.S. Dept. of Homeland Security
- Professional Scrum Master I & II – Scrum.org
- Azure Fundamentals (AZ-900) – Microsoft
- ISTQB Foundation Level
- Apache JMeter – BlazeMeter
- Lean Six Sigma Yellow Belt – TCS
- Transcend Program Management – TCS
- Elevate Runway & Contextual Master – TCS
- ABLAZE G&T Transformation – TCS/INSEAD

EDUCATION

Bengal Engineering and Science University (Now known as IIST), Shibpur, W.B, INDIA July 2003 – June 2007

- Bachelor of Engineering in Electrical Engineering
