SUMMARY

Quality engineering leader with 18 years in QA, the last three running a 30+ engineer QE organization across the US and India. Most of my recent work has been getting teams to use AI every day and to trust what it produces. I built QIS, a set of GitHub Copilot agents and skills that Dev and QE squads use for story reviews, test design, Playwright automation, PR review and defect triage; it cut analysis and design effort 60–70% and won a Technology Innovation Award. I'm as comfortable setting test strategy and AI guardrails for a large organization as I am writing the agent, the PowerShell script or the Playwright fixture myself.

18+	**30+**	**60–70%**	**~98%**
years in quality engineering	engineers led, US & India	less analysis & design effort	CSI, zero escalations

CORE SKILLS

AI in QA: AI agents and skills (GitHub Copilot, MCP) · AI adoption and enablement · Hands-on AI training and workshops · Testing and evaluating AI skills and agents · Self-healing test automation · AI usage telemetry · Guardrails and human-in-the-loop review

Quality engineering: QE strategy and governance · Test automation architecture (Playwright, Selenium, MSTest/API) · Test data management · CI/CD and shift-left (Azure DevOps) · Performance testing (JMeter, Taurus) · ETL and migration testing

Leadership: Leading 30+ engineers across the US and India · Hiring and coaching · Accessibility (DHS Trusted Tester, WCAG, Section 508) · Power BI quality dashboards · RUM-driven testing (Datadog)

EXPERIENCE

GLOBAL IT SERVICES & CONSULTING FIRM
Jan 2007 – Present

One employer for my whole career, across five long client engagements. Current title: QA Technical Architect.

QA Technical Architect
Feb 2023 – Present

Logistics company, North America · remote

A large logistics business moving its core systems from legacy platforms to the cloud.

- Lead a 30+ person QA organization across the US and India. I own test strategy and automation architecture, give hiring input, coach leads, and set the engineering standards every squad works to.
- Built QIS, an AI agent workflow on GitHub Copilot and MCP. Its agents and reusable skills check stories for readiness, design test cases, write Playwright automation, review test PRs against six quality gates, attach evidence to work items, triage defects and run incident RCA. Squads picked it up on their own; analysis and design effort fell 60–70%, and it won an enterprise Technology Innovation Award.
- Ran the AI adoption program around it: demos at All Hands and TechTrek, lunch-and-learns, hands-on labs where engineers write their own skills, custom agents and instruction files, a champion in each squad, and usage telemetry built on agent lifecycle hooks, so adoption figures came from real usage rather than surveys.
- Designed governed self-healing for Playwright tests. A test can repair a moved or renamed element on its own, but a change that looks like a real defect goes to a person instead of being patched over.
- Built a service dependency and readiness dashboard and shipped the first version in under a week. False defect reports dropped 70–75%, and each incident now takes 4–6 fewer hours to investigate.
- Set up test data management from nothing: Python and PowerShell scripts that mask production-derived data and generate synthetic data, so squads can test safely without a vendor tool.
- Brought real-user monitoring (Datadog RUM) into test design, so the paths customers actually use get tested first, with Core Web Vitals as pass/fail gates.

- Led ETL testing for a finance-system migration to a cloud ERP, checking accuracy and consistency across every connected system.
- Built an AI triage agent that summarizes new issues and suggests a probable root cause (internal AI hackathon winner), and a PowerShell installer that cut test-environment setup from about 25 minutes to 2–3.
- Report defect trends and release readiness to leadership in Power BI. The program has held ~98% customer satisfaction through FY25–26 with zero escalations.

QA Architect & BI Reporting Lead
2018 – Feb 2023

Global professional services firm

E-learning, innovation and audit technology programs.

- Managed a QA team of 25+ across several locations, covering UAT planning, test design and defect management for enterprise learning platforms.
- Led an AI video transcription project on Azure Cognitive Services and embeddings that made training videos captioned and searchable.
- Led ETL testing for large data migrations, validating transformations and data quality from source to report.
- Tested for WCAG, ADA and Section 508 compliance as a DHS-certified Trusted Tester.

Senior QA Lead & Scrum Master
2015 – 2018

Global professional services firm, US practice

- Ran several QA projects at once for enterprise mobility and advisory platforms, moved manual regression to automation, and ran sprint ceremonies, triage and release validation as Scrum Master.

QA Lead, Analyst & Application SME
2009 – 2015

Global bank, real estate lending

- Led testing for a real estate lending portfolio for more than five years, four of them onsite in the US as consultant and application SME.
- Helped found the client's Testing Center of Excellence and served on its analysis and planning leadership team.

Application Developer
2007 – 2009

Global telecom carrier

- Wrote PL/SQL packages and procedures, data models and design documents for telecom applications.

INDEPENDENT WORK & WRITING

- **Author, AI-Native Quality Engineering (draft, with reviewers).** A field guide to designing, testing, governing and measuring AI agents and skills in QA.
- **Hands-on AI labs and workshops.** Wrote a 90-minute, seven-part lab where people build a skill, a custom agent, an instruction file and prompt hand-offs in GitHub Copilot, with a facilitator guide. Designed two half-day workshops on top of it: building a skill or agent from scratch, and testing them with evaluation sets, scorecards and a nine-challenge "break the skill" exercise.
- **QIS-Skills (private beta).** Copilot agent skills for quality engineering, rebuilt from the QIS playbooks as generic, company-neutral skills.
- **A2Quest and Bhaktiverse.** An adaptive math game for kids and a devotional web and Android app. I designed, built and shipped both.
- **Writing.** Articles on Medium about AI in QA, including telemetry for AI coding agents and turning senior QA judgment into repeatable playbooks.

CERTIFICATIONS

GitHub Copilot (GH-300) · Microsoft Azure AI Fundamentals (AI-900) · Azure Fundamentals (AZ-900) · Databricks Generative AI Fundamentals · Professional Scrum Master I & II · DHS Trusted Tester · ISTQB Foundation Level · Lean Six Sigma Yellow Belt

EDUCATION

B.E., Electrical Engineering, Bengal Engineering and Science University (now IIEST), Shibpur, India 2003 – 2007
